

TOTAL SAFETY®

# COVID-19 PCR TESTING

## COVID-19 PCR Swab Testing Services

We are all faced with the dilemma of getting back to work while also mitigating the threat of a coronavirus outbreak interrupting operations. Testing and tracking is the best way to break the chain of infection. At present, polymerase chain reaction (PCR) and antibody testing are the two most common methods of testing for SAR-CoV-2 virus that causes COVID-19. By detecting viral RNA, you can tell whether someone has the virus very early on.

Total Safety has the resources and capacity to offer the PCR test to your entire workforce for SAR-CoV-2 that causes COVID-19. Our Credentialed Medical Team will bring all the resources required to set up a testing site to administer PCR testing. We partnered with multiple labs across the country to deliver fast results. In most cases, we can have test results to the patient within 72 hours of delivery at the lab. This saves valuable time when an employee may be in quarantine and unable to work.

## COVID-19 PCR Testing can be layered on with Antibody Testing.

Our COVID-19 PCR testing can be set up to run in tandem with antibody testing. Antibody testing is a simple finger stick and only takes ten (10) minutes to obtain results. Antibody testing can reveal two markers: (IgM) indicating more recent infection, and (IgG) indicating a past infection. Total Safety recommends that any patient showing signs of either marker receive a PCR test which can indicate if the person is actively infected and a potential threat to your workforce.

Total Safety is dedicated to serving others and upholding our mission: W3...to ensure the safe Wellbeing of Workers Worldwide In response to the COVID-19 pandemic, we have developed new strategies and solutions to keep companies in compliance with CDC guidelines, including COVID-19 testing services. We are here to help manage a safe environment for your workforce in accordance with CDC guidelines. Our onsite medical management service offerings are backed by our Medical Director and executed under his guidance. Contact us today.

\*All records, reporting and data management is handled in accordance with HIPAA and CLIA requirements in accordance with FDA and CDC guidelines. Testing data is reported through lab-based software to state, local, and public health departments. This information is shared with reporting entities based on donor's place of residence.
